Inventory:

- end on stage
- apron stage
- 220 cinema style seating
- control box
- lighting and sound equipment *

*see technical inventory for details

Theatre Specification

Auditorium

Flying

The venues flying system is currently decommissioned, and the venue has no useable rigging positions. All positions must be created from the ground up (e.g. booms, goal posts, etc).

Please note that there are a small number of fixed scaffold bars around the venue, these are also decommissioned and not suitable for suspending equipment.

Stage Wiring

The existing stage wiring is defunct, so no installed circuits function.

The venue is currently powered via a temporary mains system. As part of this system, the stage has one 63A 3-Phase supply, as well as a number of 13A general power sockets. A distro package is available to support bookings using the 63A supply.

There is currently no data or facilities wiring (e.g. DMX, comms, cue lights, mic lines, tie-lines, speaker lines), so all installations must be run on loose cabling).

Show Relay

The venue has the capability to support a single show relay feed between the stage and green room. Currently this must be requested when booking, as the infrastructure is not permanent.

Theatre Specification

First Floor Circle Bar

Capacity: 100 max with a risk assessment
