

SUMMER COURSES

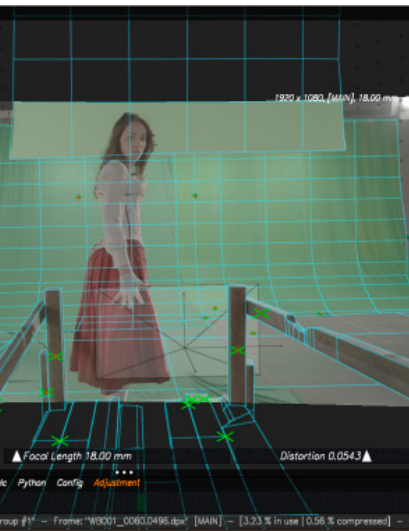

aub.ac.uk/suvfx

VISUAL EFFECTS (VFX)

Visual Effects is an exciting and rapidly developing industry which has evolved into a visual language influencing every level of the film making process. Led by our experienced Visual Effect Course team, you will learn the fundamental skills involved in visual effects for film and explore the techniques and technology used. You will be encouraged to develop your own creative identity through a series of exercises, unleashing your imagination and ideas to bring your visual effects work to life.

During the course you will explore the visual effects production process in a fun and exciting way. Working on location you will have the opportunity to shoot live action footage in a green screen studio as well as experimenting with post production techniques and digital processes. As part of a collaborative project you will work in teams on location; sharing ideas and reviewing your work. Using the university's state of the art digital facilities, our experienced VFX tutors and technicians will guide you through the creative process to enable you to see your ideas through from concept to final conclusion.

You will have the opportunity to increase your VFX skills through a series of practical sessions covering areas such as rendering from nuke and digital matte painting to finish off your visual effects project, which will be screened for discussion and critiques at the end of the course.

WEEK ONE

Data Acquisition & Production Design

Introductions and inductions

Planning of project, production design

Lighting green screen - Live action shoot

WEEK TWO

Preparation of footage and 3D modelling

Paint and roto

3D Modelling and Rendering

WEEK THREE

DMP (Digital Matte Painting)

Green screen removal

Scene assembly

Render from Nuke

Compositing

Editing

Screening and Discussion

Farewell event

EXHIBITION OF WORK & CERTIFICATE
